## 1. IMPLEMENTASI RUNTIME CONFIGURATION Ini merupakan file JSON dari bank transfer config

```

     12
     13
               }
```

Program ini menggunakan class BankTransferConfig yang secara otomatis membaca file konfigurasi JSON saat aplikasi dijalankan. Jika file tersebut tidak ditemukan, maka class akan membuat file baru berisi konfigurasi default. Dalam alur utama program, langkah pertama adalah menampilkan pesan berdasarkan bahasa yang ditentukan dalam konfigurasi (lang). Selanjutnya, program akan menghitung biaya transfer berdasarkan jumlah nominal yang dimasukkan dan ambang batas (threshold) yang telah ditentukan, lalu menampilkan total biaya yang harus dibayar. Setelah itu, pengguna diminta untuk memilih metode transfer dari daftar yang tersedia dan memberikan konfirmasi transaksi. Terakhir, program akan memvalidasi apakah input konfirmasi sesuai dengan nilai yang telah ditentukan dalam konfigurasi; jika sesuai, transaksi dianggap berhasil, jika tidak, maka transaksi dibatalkan.
